Mumbai, Maharashtra(INDIA)

 +91-8652329313 •  ag5224741@gmail.com •  [LinkedIn](#) •  [Github](#) •  [Portfolio](#) •  [LeetCode](#)

Software Engineer and DevOps professional with 5+ years of experience designing, deploying, and operating high-availability systems in fast-paced enterprise and banking environments. Proven ability to architect full-stack applications using the MERN stack, build robust CI/CD pipelines with Jenkins and GitHub Actions, and manage cloud-native infrastructure on AWS. Equally strong in observability engineering — instrumenting systems with Grafana, AppDynamics, and PagerDuty to drive proactive incident detection and sub-SLA resolution. Passionate about writing clean, maintainable code and automating everything that should not be done manually. Currently targeting high-impact roles in Full Stack Development or DevOps Engineering where engineering rigour, cloud expertise, and a bias for automation can drive real business outcomes.

TECHNICAL SKILLS

Frontend: React.js, Redux, HTML5, CSS3, Bootstrap, JavaScript (ES6), React Router

Backend: Node.js, Express.js, REST APIs, JWT, JSON, Python, Java

Databases: MongoDB, MySQL, PostgreSQL

DevOps & CI/CD: Docker, Kubernetes, Jenkins, GitHub Actions, Git, Linux, Bash, Nginx

Cloud: AWS (EC2, S3, IAM, CloudWatch, Lambda)

Monitoring & Alerting: Grafana, AppDynamics, Sumo Logic, Sentry, PagerDuty, CloudWatch

Tools & Practices: Postman, Jira, ServiceNow, ITIL, Incident Management, Change Management, SLA Management, Agile/Scrum

EXPERIENCE

Software Engineer – Application & Systems | Kotak Mahindra Bank (Techplus Infotech)

Mumbai • 2022 – Present

- Engineer and maintain core digital banking modules for the **Kotak 811** platform — including **UPI payments, NEFT/RTGS/IMPS** bank transfers, SIM binding, debit & credit card services, personal loans, and mutual fund transactions — ensuring seamless, high-availability operation for millions of end users.
- Work extensively on **Finacle** (Infosys core banking system) and **BCIF** (Banking Core Integration Framework) to triage data inconsistencies, trace transaction failures, and coordinate fixes with core banking and middleware teams.
- Diagnose and resolve complex technical issues across the **full transaction lifecycle** — from API gateway failures and payment gateway timeouts to database deadlocks and downstream service errors — using log analysis via Sumo Logic, Grafana, and AppDynamics.
- Built and maintain real-time Grafana and AppDynamics observability dashboards tracking UPI success rates, loan disbursement flows, and card activation funnels, **cutting Mean Time to Detect (MTTD) by 35%**.
- Drive CI/CD release deployments via Jenkins pipelines for banking modules, coordinating CAB approvals, environment validations, and rollback plans to ensure **zero-downtime releases**.
- Automated operational workflows using Python and Bash scripts — including transaction reconciliation checks, log rotation, and alert noise reduction — saving **8+ manual hours per week**.
- Administer AWS infrastructure (EC2, S3, IAM, CloudWatch) supporting banking application workloads, and maintain runbooks and RCAs that **reduced repeat incident resolution time by 40%**.

Systems Engineer | Concentrix

Mumbai • 2021 – 2022

- Investigated and resolved complex application and infrastructure issues for enterprise clients across distributed systems, consistently maintaining **98%+ SLA adherence**.
- Performed deep-dive log analysis using Sumo Logic and Sentry to identify root causes of system failures and performance degradations, driving a **22% reduction in recurring defects** quarter-on-quarter.
- Designed and executed **REST API test suites** in Postman for functional and regression coverage, working directly with engineering teams to validate fixes and accelerate deployment cycles.
- Engineered and deployed configuration and infrastructure change requests end-to-end in ServiceNow, including impact analysis, CAB documentation, and verified rollback procedures.
- Produced system postmortem reports and knowledge-base articles in Confluence that **reduced Mean Time to Resolve (MTTR)** for recurring system issues by 30%.

PROJECTS

[XMedify](#)

React Medical Center Finder with Appointment Booking & LocalStorage Persistence

- Built a fully responsive React application enabling users to search hospitals by state and city across the USA, view real-time availability, and book appointments with date/time selection and persistent booking history via localStorage.

React.js JavaScript REST API React Router State Management localStorage Bootstrap Git

[Expense Tracker](#)

Responsive React Expense Tracker with Real-Time Wallet Balance & Visual Analytics

- Developed a full-featured frontend expense management app with CRUD operations, real-time wallet balance updates, Chart.js visualisations for spending insights, and localStorage-backed data persistence across sessions.

React.js JavaScript Chart.js State Management localStorage Responsive Design Git

Naukri Job Application Automation Bot

Python + Playwright CLI bot for automated job applications at scale

- Built a headless browser automation bot to apply to 100+ Naukri.com job listings daily — handling OTP login, dynamic form fields, recruiter chatbot Q&A, and a persistent skip list to avoid duplicate applications.
- Integrated a companion stats script for daily tracking of applications sent, skipped, and failed, providing actionable visibility into pipeline health.

Python Playwright Automation CLI JSON Linux

AI-Powered Cover Letter Generator

Claude API-backed tool for instant tailored cover letters

- Built an interactive single-page HTML/JS tool pre-loaded with CV context that calls the Claude API to generate role-specific cover letters in three tones (formal, confident, concise) with one click.

JavaScript HTML5 CSS3 REST API Claude API

EDUCATION

MSc Information Technology – Mumbai University

2019 – 2021

BSc Information Technology – Mumbai University

2016 – 2019

CERTIFICATIONS

Full Stack Software Development Program – Crio.Do
